

DevOps Cloud Engineer (m/f/x) in Hamburg, Germany

IT · Hamburg, Germany

[Apply for This Job](#)

Department IT

Employment Type Full-Time

Minimum Experience Mid-level

Investors and partners include Santander and Microsoft.

10.000 businesses in 4 countries.

Founded in 2013, headquartered in Hamburg, Rödingsmarkt 20.

Established marketplaces dominate today's e-commerce landscape: How and where we buy products but also where we can sell them. Their market power widens the gap between the market shares and makes it hard for people to make a living selling online.

Founded in 2013, payever's mission is to challenge this status quo on behalf of small and medium sized businesses against the commerce giants. We do so by providing the right tools for sellers of any size to start, run and grow a successful business: We offer online shop as well as point of sale systems and highly flexible and customized payment, marketing, shipping and communication solutions. We start where others stop with the ultimate goal to free commerce.

We already convinced Santander and Microsoft to join our mission and help us to empower over 10.000 businesses in Germany, Sweden, Denmark and Norway to compete against existing marketplaces.

Let's make commerce easier for everyone and have small businesses enriching our shopping experience, lives and our local communities.

Job Description

As we keep growing to fuel our capability to deliver new business solutions, our team is in need of a great new member. In the role of **DevOps Engineer**, you'll jump in working on our most advanced projects from day one, being truly involved in the direction of the product. In this position, you will manage infrastructure projects and processes. A keen attention to detail, problem-solving abilities, and solid knowledge base are essential.

In this role, your day will look something like this:

- Manage an ever-evolving platform with over 100 microservices
- Work directly with the DevOps and Admin team to test system integrity
- Identify sources of manual work related to onboarding new projects from inception to CI/CD pipeline and strive to automate as much as possible
- Reduce the time it takes to build, deploy, and configure software to all environments
- Contribute to the feature development and maintenance of our CI/CD pipeline
- Design, build and test tools to improve deployment efficiency and gain visibility into production systems
- Translate development team use cases into infrastructure requirements
- Brainstorm with your team, help improve our integration, deployment and monitoring story
- Work closely with developers to guide and help solve problems
- Maintain day-to-day management and administration of projects
- Evaluate and implement new solution with reliability, scalability and security in mind
- Share & document your knowledge within your team
- Migrate existing services to our Kubernetes infrastructure
- Ensure backups of running systems are done properly and regularly health-check those backups

Your skill set, capabilities and previous experience (you don't need to have all the skills listed)

- Degree in Computer Science, Engineering or similar relevant field
- 2+ years Devops experience
- Strong experience in implementing and administering CI/CD pipelines

- Ability and experience in GittlabCI would be a great plus
- Implementation experience with Docker & Kubernetes
- Advanced working knowledge of cloud infrastructure e.g. AWS, preferably Azure
- Expertise in operating highly available distributed systems (microservices) in a production environment
- Knowledge in scripting languages (e.g. Bash, Python, Go)
- Knowledge of the HTTP protocol, RESTful APIs and TCP/IP networking

Fully optionally - but this would enfast the learning process:

- Working knowledge with Istio canary deployments
- Experience with configuration management tools and managing infrastructure as code (e.g. Ansible)
- Experience with SQL/NoSQL (e.g. MongoDB)
- Experience with container security (e.g. Aqua)
- Board know-how in running web applications based on technologies like Javascript, NodeJS and Nginx
- Comfortable with build tools and using git
- Familiarity with log aggregation and analytics gathering (e.g. Kibana, Grafana)
- Familiarity with Testing automation tools

What you can expect from us

- The rare opportunity to change the world around you with a unique product
- Projects which keep your mind fit and soul happy
- Direct influence of your work on consumers and partners
- Intuitive - trial and error - mentality
- Being part of a fast-growing company
- Ground floor opportunity to shape the strategic direction of the company
- Fast execution on good ideas
- Sharp, motivated co-workers in a fun office environment
- Panorama office with view on the harbour at the Rödingsmarkt
- Apple Mac device plus 27" external monitor, an ergonomic chair and your own desk
- Fresh fruits, juices and coffee in our cozy kitchen

We're 6 years old now, but we're hungry and ambitious like it's Day One - we still have the same vision and are looking for you supporting us to achieve our goals!

Sounds exciting? We think so too, and can't wait to hear from you!

Please note that all applications must be completed using the online form - we do not accept applications via e-mail.
